

Secure the Way Forward with the PA-500 Series

In an era defined by rapid AI adoption and evolving cyber threats, your network needs a foundation for the future. The **new** Palo Alto Networks PA-500 Series is designed to help you Secure the Way Forward, providing enterprise-grade protection right-sized for growing businesses, commercial hubs, and branch offices.

NEW! PA-505 / PA-510

Your First Step into Enterprise-Grade Firewall Protection

The PA-505 and PA-510 are purpose-built for small and growing businesses that need strong and affordable security without enterprise complexity.

Ideal for customers who:

Are growing and outgrowing basic or legacy firewalls

Want stronger protection without operational overhead

Rely on cloud and SaaS applications

Have lean IT teams or are MSP-managed

NEW! PA-520 / PA-560

Performance-Optimized for Modern, AI-Driven Networks

The PA-520 and PA-560 are designed for modern, high-demand workloads, while keeping full security enabled by default.

Built for environments that need:

High throughput with full security inspection

Strong concurrent session handling

Consistent performance across diverse applications

Support for AI, API, and modern application traffic

Proven Performance & Scalability

Up to 2× threat prevention performance

Built-in local logging for better visibility and troubleshooting

AI-ready performance with improved throughput and stability

Simplified onboarding with Zero Touch Provisioning (QR code scanning)

Quantum-ready design to protect your security investment for the future

All listed PA-500 Series models are open for order across JAPAC. Shipment timing in India, China and Thailand will align with local readiness and availability schedules. In China, shipment of all models except PA-505 and PA-510 is expected from March onward. Early order placement is encouraged to secure allocation.

Independent testing and real-world scenarios demonstrate clear advantages over comparable platforms:

Decisive AI & Modern Traffic Performance

- The PA-560 delivered **2× to over 8× higher throughput** than comparable models in AI-driven traffic scenarios
- The PA-520 outperformed equivalent models across all tested workloads

Superior Encrypted Traffic Stability

- Sustained higher **TLS 1.2 and TLS 1.3 decryption throughput**
- Maintained platform stability under load, where competing platforms experienced memory and stability issues

Better Application Scalability

- Consistent throughput across mixed enterprise applications
- Competing platforms experienced throughput drops or failures on critical protocols

Lower Total Cost of Ownership

- Up to **60–70% lower TCO per protected Mbps**, driven by higher effective throughput and more efficient hardware utilization
